

# *Week One- Concealers*

Problem	Solution
Dark Under Eye Circle	Apply a thin layer of concealer only to the dark area, and stipple- Do not conceal across the entire eye area.
Puffy Under Eye area	Using a concealer brush or Q-tip, draw a thin line of concealer under the puffy area. Stipple in.
Blemishes	Using a Concealer Brush or Q-tip place a tiny dot over each blemish and stipple in.
Sun Spots, age Spots, Liver Spots	Color inside the darker area with a concealer, be very careful not to go outside the lines. For Ivory or Beige skin, yellow works wonders. Stipple in.
Facial Masking- Bronze and Ebony	Use a lighter concealer or foundation to apply over the darker areas. Blend in and then cover with the appropriate foundations. You will need at least 2 foundations to balance facial masking.
Broken Capillaries	Use a concealer brush to draw along each little line and then stipple. Make sure you do not try to cover the whole area, but each individual line.
Freckles	The only way to cover freckles is to treat each freckle like a blemish and it is not recommended. Embrace them, they make you look youthful!
